The invention provides a purchased commodity accommodating and transporting apparatus having a self scanning function and a POS system which prevent an unjust act such as to carry out a commodity without reading a commodity code whether it is intentional or accidental. The purchased commodity accommodating and transporting apparatus comprises a commodity code reading section for reading a commodity code applied to a commodity, an accommodation section for accommodating therein a commodity whose commodity code has been read, a weighing equipment for measuring the total weight of commodities accommodated in the accommodation section, a weight determination section for detecting the increase/decrease of the total weight of the commodities in the accommodation section, and an alarm generation section responsive to a result of the detection for generating an alarm when the total weight of the commodities has changed without reading a commodity code.
